

# Online videos

Version 1 - November 2007

Using MotionBox ([www.motionbox.com](http://www.motionbox.com))

## Getting started: upload and edit videos

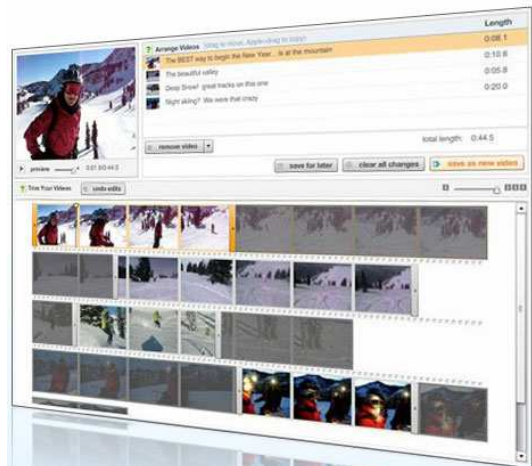

- 1) Visit <http://www.motionbox.com> and sign up for an account.
- 2) Look for the 'upload videos' link. A new window will open. Select the video files on your computer and choose 'start upload'. (Remember to **check the privacy settings** for your videos)
- 3) It can take up to an hour for your videos to upload and become available to edit. When they are available you will find them in the 'My MotionBox' menu.
- 4) Select the videos you want to edit together and choose 'Add to Mixer'
- 5) Go to the mixer to **edit your video**. You can arrange your clips in the order you would like, and trim clips by dragging the '<' handles.
- 6) When you have arranged your clips as you want, you can **save your new video**. You can make it public to **share your video with others**.

Video is a powerful tool for **storytelling** and **sharing information**.

Online video editing tools let you **create, edit and share videos** easily **without needing any special tools**.

You can **capture video footage on your digital camera or mobile phone** or with a digital video camera.

### Important things to think about

Make sure you have permission from everyone in a video before you upload it to a video editing or sharing website. You should explain how you plan to use video clips you gather. You may need permission from a parent or guardian of anyone under 16.
